

Shared Experience from NextGen Customers

Customer A currently uses Lithospense® NextGen in three different formulations with loadings up to 5%. Customer had seen better transparency, better quality and did not experience any decrease in tinting strength.

After adopting Lithospense® NextGen, Customer B was able to increase extender loading in sheetfed and metal deco inks comparing to previous kaolin product. Ink misting is also reduced.

Customer C switched to Lithospense® NextGen because it helped to provide better ink quality and achieved positive bleed results. “This product provides the best ink water balance we have seen.”
