## **KaMin Expands Polygloss®90 Capacity**

**WRENS, GA June 13, 2014** – KaMin has completed an expansion of its Polygloss®90 production line at its Wrens plant. Polygloss®90 is an ultra-fine particle size, high brightness kaolin, designed to provide ease of dispersion and improved gloss in both aqueous and solvent-borne coatings and inks. Polygloss®90 contributes to improved opacity through efficient TiO<sub>2</sub> spacing and can be loaded to higher pigment volume concentration levels than standard extender pigments, without decreasing gloss and with minimal effect on viscosity.

“The extraordinary success of Polygloss®90 has driven this expansion,” said Mark Gillespie, Global Industrial Sales Director. “Customers globally recognize that this is a unique product. Our proprietary technology has enabled us to deliver a product that delivers great value to our customers and enables them to reduce formulation costs. This expansion will help us to continue meeting the current and future demand of our global customers for Polygloss®90.”

**About KaMin LLC** – With over 80 years of experience in mining and processing kaolin clay, KaMin delivers value to customers worldwide with high quality kaolin solutions for the most demanding applications.

KaMin mines and produces its kaolin in the US at three Georgia plants – Macon, Sandersville and Wrens – and at its CADAM S.A. subsidiary in Brazil. KaMin has been recognized has been recognized not only as a leader in product quality and export volumes, but also in its safe mining practices for many consecutive years.
